## OVERVIEW

Cellulitis (sel-u-LI-tis) is a common, potentially serious bacterial skin infection. Cellulitis appears as a swollen, red area of skin that feels hot and tender, and it may spread rapidly. Staphylococcus and streptococcus bacteria are the most common causes of cellulitis.

The skin normally has many types of bacteria living on it. When there is a break in the skin, however, bacteria can enter the body and cause infection and inflammation. The skin tissues in the infected area become red, hot, irritated, and painful.

Skin on lower legs is most commonly affected, though cellulitis can occur anywhere on your body or face. Cellulitis may affect only your skin's surface — or, cellulitis may also affect tissues underlying your skin and can spread to your lymph nodes and bloodstream.

Left untreated, the spreading infection may rapidly turn life-threatening.

## Herbal Supports

Aloe Vera was proven to be anti-bacteriostatic against streptococcus, staphylococcus and other bacteria (Journal of Pharm. Science, Vol. 53, page 1287).

## INFECTION FORMULA

This formula can be made up in tea form, or as tincture, syrup, or ointment, as can most of our formulas. It is made up of plantain, black walnut, golden seal root, bugle weed, marshmallow root and lobelia. This wonderful formula kills infection, clears toxins from the lymph system, and is a natural infection fighter.

**Best used in conjunction with the Foundational Infection program**
